

## Flagler County Airport in Florida Links to WASP Central Command Center

See it Live at FAC Conference & Exposition July 23-26

Distribution;

I would like to invite you to our live demonstration of **WASP Central Command Center**. We will be exhibiting Flagler County Airport (first in Florida linked to WASP Central) along with three North Carolina airports. How valuable is it for you to know which aircraft are landing at your airport? What are the security advantages? The data is 3 clicks away at WASP Central Command Center.

The demonstration will show live video and a photo search database of recorded aircraft at each airport and will highlight the systems capability of Central Service Operation and Monitoring for enhanced security, law enforcement, aircraft management and emergency response. Surveillance of Gates, Fuel Farm, Hanger and Ramp area will also be shown.

The WASP system is a regional enterprise network web based Centrally Operated visual "tail number" identification system that combines the latest in Wireless Microwave, CCTV, Networking and Advanced Image Analysis to Capture, Analyze, Store and Produce Alerts on aircraft take-off and landing.

Security – Aircraft & Traffic Management – Law Enforcement – Emergency Response

- Time-of-Day
- Day-of-Week
- Flight Direction
- Registration Number
- Home Based or Transient
- Aircraft Type
- Aircraft Owner
- Aircraft Watch List

Please join us for a demonstration at **Booth # 7**. For more information please contact Dale Albright at 919-556-7100 (office) or 919-671-1444 (cell) or email at [dale.albright@ttiwireless.com](mailto:dale.albright@ttiwireless.com).

See you at the Show!

Regards – TTI Wireless
